AUSTRALIA'S MOST SECURE ROLLER DOOR*

Roll-A-Door Secure™.

b&d
AUTO-LOCK PROTECTION

Maximum security.

Roll-A-Door Secure™ is Australia's most secure roller door*

The garage door is the largest entry point to the home, yet it is often overlooked. Your garage door deserves the same uncompromising security as every other entry point to your home.

For decades, roller doors were built to close. Roll-A-Door Secure is built to protect. Engineered as a complete four-part system to help resist attempted forced entry, tampering and impact^.

Built to protect. Proven to perform.

Roll-A-Door Secure is the only roller door that not only meets but exceeds the Australian Garage Door Standard for locking performance and impact resistance*. Built for homeowners who expect more than a door.

Locked shut, every time.

Most garage doors just close. Roll-A-Door Secure locks shut every time. Dual AUTO LOCK™ technology, heavy duty security guides, a reinforced bottom rail and a compatible opener work together to protect against attempted forced entry, tamper attempts and impact^.

Roll-A-Door® Reinvented.

In 1956 B&D invented the Roll-A-Door right here in Australia, 70 years on we have reinvented it. Roll-A-Door Secure finally address a long, overlooked gap in home security and transforms the garage door from a simple entry point into a true security system.

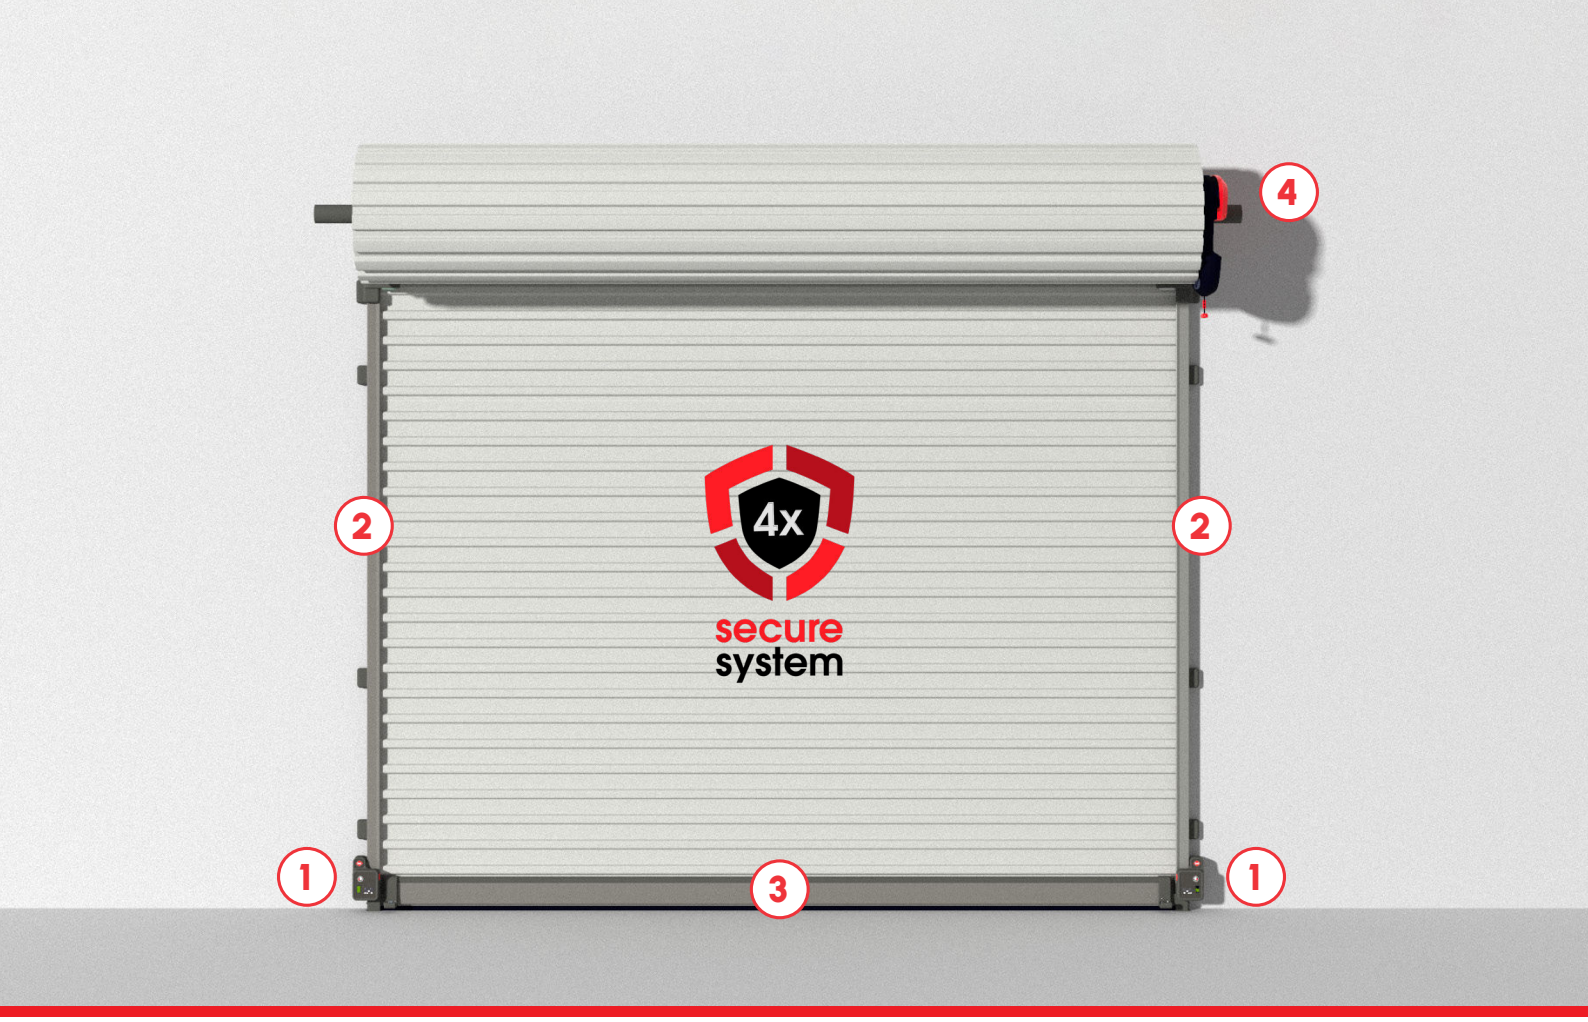
10 YEAR TOTAL CONFIDENCE WARRANTY

Visit www.bnd.com.au for full details

When you buy a Roll-A-Door Secure system, you're buying more than a door.

You're buying a complete system, tested by B&D, where every element is designed to work together for stronger security, smoother operation and long-term performance. From the locks, rails and guides to the springs, opener and door curtain, every component that makes up the system is covered by B&D's 10-year Total Confidence Warranty

*B&D tested the premium roller door offerings from Gliderol, Steel Line, Eco, Centurion and Taurean, and Roll-A-Door Secure was the only roller door that complies with section 6.3 (locking devices) of AS/NZS4505-2012. AS/NZS4505-2012 is the Australian performance standard for garage doors and rolling shutters. To meet the standard, Roll-A-Door secure must be installed correctly.
^Classified RC2 under EN 1627 and EN 1630 and Section 3 (dynamic impact testing) and section 4 (jemmy testing) of AS5039.



A complete four-part locking system.

Roll-A-Door Secure is the only Australian roller door to meet and exceed the Australian Garage Door Standard for Security^.

When the door closes, a reinforced anodised aluminium bottom rail is automatically secured within heavy-duty guide rails by dual AUTO LOCK™ technology. Working seamlessly with intelligent security features built into the opener, the system delivers superior protection and peace of mind that ordinary roller doors simply can't.

^B&D tested the premium roller door offerings from Gliderol, Steel Line, Eco, Centurion and Taurean, and Roll-A-Door SecureTM was not only the only roller door tested that complies with section 6.3 (locking devices) of AS/NZS4505-2012, but it also exceeded the testing criteria.

Four-Part Locking System.

1 Dual Side AUTO LOCK™

Positioned on both sides of the roller door, dual AUTO LOCK™* engage automatically every time the door closes. Working with the Security Bottom Rail, they secure the door in place, while a distinctive locking sound and illuminated indicators provide clear confirmation that the door is locked and protected. Designed to withstand dust, dirt and harsh weather conditions (IP66).

2 Security Guides

Heavy duty aluminium Security Guides run down both sides of the opening, keeping the door firmly secured within the frame. Engineered for added strength, they resist attempts to force the curtain out of the guide system, providing an additional layer of protection against forced entry.

3 Security Bottom Rail

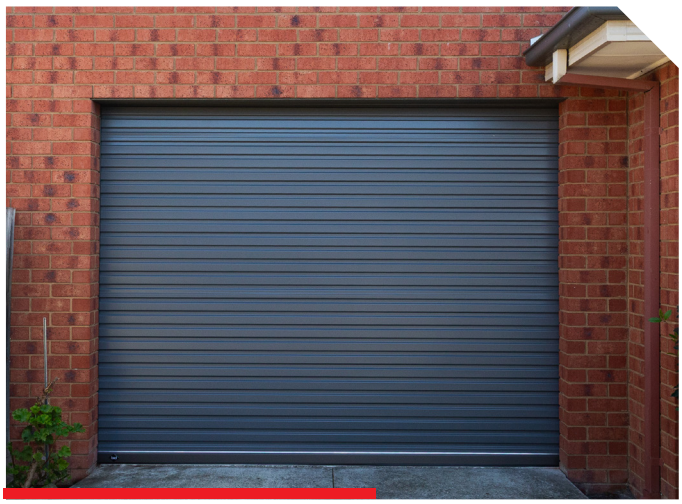
Manufactured from heavy-duty anodised aluminium, the Security Bottom Rail delivers the strength, durability and corrosion resistance needed for a critical role within the locking system. Working directly with the Dual AUTO LOCK™, it helps keep the door securely closed, resisting upward force and maintaining the integrity of the locking system.

4 Opener

The opener is what brings the Roll-A-Door Secure system to life. It does more than automate the door; it drives the Dual AUTO LOCK™ so the system can lock shut as intended. Roll-A-Door Secure should be paired with a B&D specified opener**. Quiet and reliable, it features Automatic BackDrive and reverse technology for superior protection and safety. Tri-Tran+ advanced encryption technology is also embedded to prevent code theft.

*Patent pending ** A B&D specified opener will be recommended during the measure and quote.

Profiles



Deluxe™

The Deluxe Roll-A-Door profile offers a clean look that suits a range of home styles. Available in both single and double door sizes, it combines modern street appeal with the strength, durability and reliable performance.

Single Door

Double Door

Profile

NEO®

Roll-A-Door Neo combines contemporary design with the practical benefits of a roller door, delivering a clean architectural finish while maximising valuable ceiling space. Available in single door sizes, it offers the sophisticated look of a sectional door with the strength, security and space-saving convenience of a B&D roller door.

COLORBOND® steel colours are represented as accurately as possible, but we recommend viewing an actual product sample before purchasing, as light conditions and printing may affect colour tones. COLORBOND® is a registered trademark of BlueScope Steel Limited. We suggest consulting a B&D mobile showroom or visiting your local B&D Dealer to see a sample. Colour and product availability may differ depending on your location, please refer to your local B&D dealer for more information.

Claims based on B&D benchmark security testing and comparative testing against selected roller doors. RC2 classification is in accordance with EN 1627 and EN 1630 and applies when Roll-A-Door Secure is installed correctly as a complete system. AS/NZS 4505-2012 is a strength and performance standard for garage doors and rolling shutters and is not a burglary-resistance standard. *A surcharge applies to these colours.

Security Bottom Rail

ANODISED FINISH

Featuring a premium gunmetal grey anodised finish and ribbed profile, the Security Bottom Rail provides a distinctive visual signature of the strength, innovation and security engineered into the system. More than a design feature, it helps identify the door as a Roll-A-Door Secure, creating a visible deterrent for would-be thieves.

Reliable.
Beautiful.
Secure.

All the benefits of a B&D roller door

Roll-A-Door Secure still delivers the everyday benefits you've come to expect from a B&D roller door: smooth, quiet operation, dependable performance, durable COLORBOND® steel, and a clean look that suits a wide range of home styles. Tested to 30,000 open-and-close cycles or 20-years, it is built for reliable performance year after year. Nylofelt running strips, invented by B&D, help the door glide smoothly and quietly, while a strong drum supports the curtain for long-lasting durability.
